East House improves their security posture

ABOUT THE PARTNER

Founded in 1996, East House is a non for profit organization located in Rochester, NY that provides residential and recovery support to individuals who have either serious mental health or substance disorder diagnosis'.

With staff of approximately 200, East House supports individuals in their path to recovery.

East House
moving lives forward

QUICK SUMMARY

• SIZE: 200 EMPLOYEES
• LOCATION: ROCHESTER, NY
• NATURE OF BUSINESS: Health & Human Svcs.
• ENDPOINTS: 200

THE PROBLEM

As a HIPAA compliant organization, East House were performing a patch schedule with no full visibility of risks on their network.

THE SOLUTION

CYRISMA's data classification, secure configuration and risk awareness capabilities gives customer's a full holistic view of their network and endpoints.

THE END RESULT

East House are able to fully understand the risks identified in their environment and with features and capabilities of CYRISMA, were able to take the necessary action to mitigate vulnerabilities through different mechanisms that were never considered before.

CHALLENGES

The only function of the vulnerability management process East House had was a patching schedule with no way to verify if they were applying their patches everywhere within their network.

During this time, East House had no overall cyber risk visibility that would provide them with information about other risks that were potentially present on their network and endpoints such as data classification, secure configuration and their tactical risk awareness.

Being a HIPAA compliant organization, East House needed a cybersecurity risk platform to be implemented to ensure their organization remained compliant thus reducing their risk exposure and likelihood of any potential data breaches.

CYRISMA SOLUTION

1 DISCOVER - CYRISMA gives our customers the ability to identify risks and unknown vulnerabilities.

2 UNDERSTAND - Removing cybersecurity complexities, our customers can understand the risks so they can easily stay organized.

3 MITIGATE - We simplify the mitigation process by assigning accountability to individuals within your organization or service provider to reduce your risks to a tolerable level.

4 MANAGE - With the CYRISMA platform, you can analyze your risks to create trends and metrics that gives you insight on the past, present and future security objectives to heighten your security posture.

"The solution that CYRISMA offered us was a way to discover all devices within our network, provided a user-friendly output of active vulnerabilities on our network and endpoints, identified where we had a gap in saving certain types of sensitive data which is helping us clean up our environment by properly archiving data, and we were able to see how our devices stack up to CIS Benchmarks and identified certain settings that needed to be changed/updated" Elizabeth McGrath, Director of IT

BENEFITS

Rapid Deployment - With minimal impact on resources, the CYRISMA implementation is quick and easy. Typically after 1.5 hours, customers are ready to go.

Proactiveness - CYRISMA allows our customers to develop a proven security framework reducing the risk of of cyber threats through a three-way structured approach *(Data Discovery, Risk Assessment & Relevant Action)*.

Simplicity - A feature rich platform with all the features on one single and easy to use interface to eliminate the need to piece multiple technology vendors together to reduce confusion and increase focus.

"By using the Mitigation Planning that CYRISMA offers, we have been able to reduce the potential risks that exist and assign remediation to both internal and external IT resources and have the ability to monitor the progress. Also, this has given us the Executive Summary reports necessary to keep our board informed of our current state and progress for cybersecurity initiatives" Elizabeth McGrath, Director of IT

About CYRISMA

CYRISMA is a consolidated SaaS platform for complete cyber risk management. With multiple scan types and capabilities included in a single interface, CYRISMA eliminates the cost and complexity of the multiple scanning and assessment tools that you would otherwise have to use for effective risk management.

Platform capabilities:

1. Sensitive Data Discovery
2. Internal and External Vulnerability Scanning (Agent-less and Agent-based)
3. Secure Configuration Assessment
4. Dark Web Monitoring
5. Risk Monetization
6. Risk Mitigation
7. Compliance Tracking
8. Risk Scoring and Reporting

Why use CYRISMA:

· Allows for tool consolidation, reduces complexity
· Multiple powerful features in a single platform
· Outcome-focused, with easy-to-track, measurable results
· Easily addresses budget and resource constraints
· Reporting on several critical, sensitive risk areas
· Best solution for Cyber Risk Assessments

"As a non-profit, East House needs to be cost-conscience regarding the tools we use. We love that CYRISMA gives us the ability to understand the risks that are present within our environment and actions that can be taken to remediate identified vulnerabilities. CYRISMA has given us the ability to look at our environment from several different angles that we did not consider previously" Elizabeth McGrath, Director of IT
