

### 3 DIFFERENTIATORS

#### Simplicity

CYRISMA removes complexity and brings simplicity to security. The single interface is user friendly and offers easy-to-read dashboards. This allows anyone from the CEO to the Director of IT to easily view risk factors and take appropriate action.

#### Affordability

CYRISMA's core mission is to make cybersecurity affordable so everyone has access to a reliable and effective platform at low cost. Not only is CYRISMA priced competitively, your costs are reduced significantly as you use CYRISMA. No need to hire additional resources, no add-on charges for additional CYRISMA features that become available, full platform deployment in less than 2 hours. CYRISMA offers significant cost savings, protecting your organization.

#### Scalability

CYRISMA is so simple to use that we can deploy it within hours without having to spend weeks training you and your staff.

### 2 CASE STUDIES/TESTIMONIALS

#### Coordinated Care Services, Inc.

After thoroughly reviewing several security solutions – CCSI turned to CYRISMA for their Vulnerability Management services. By utilizing our root cause analysis CCSI was able to move their vulnerabilities from a whopping 372 down to 37 in just two hours time. This had zero impact on their day-to-day operation, and they were able to put valuable time back into other high priority items.

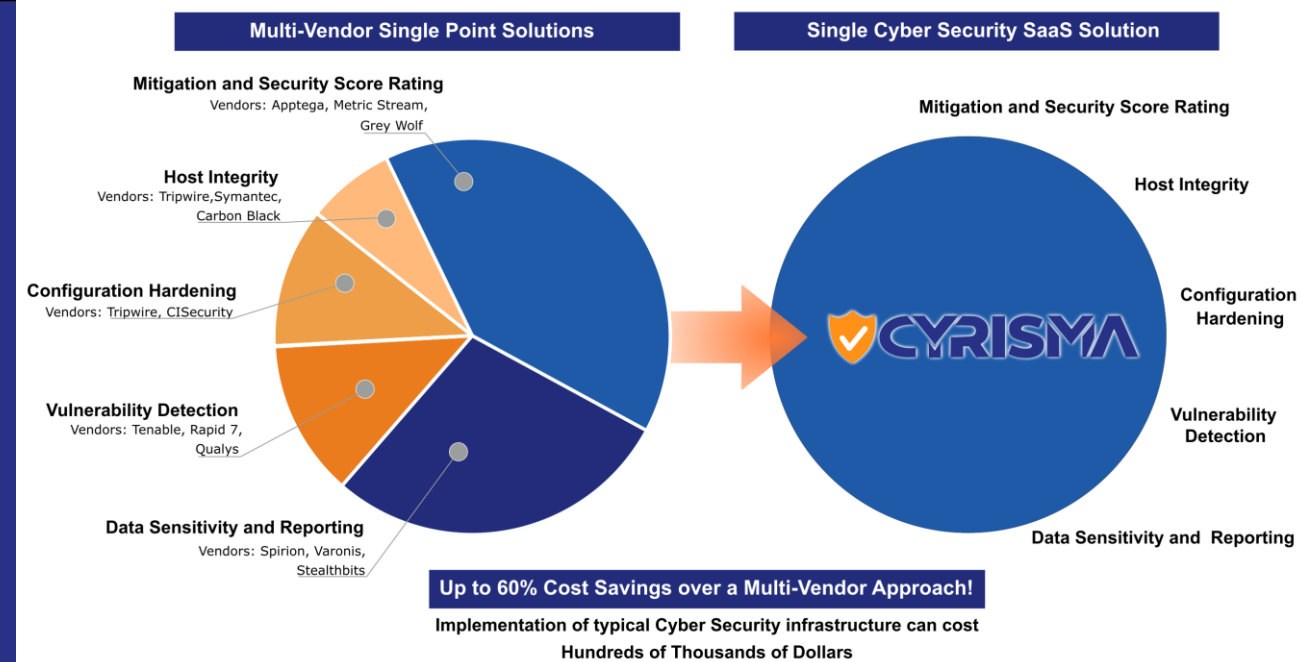

#### Solis Security

"CYRISMA is not only easy to install and configure but we started seeing results within seconds of getting the product set up. The interface is intuitive and runs smoothly. The only thing that impressed me more than the product is the team behind it, any questions I had were answered immediately and if a problem did arise, a lot of the times the CYRISMA team saw it before me and contacted me with solutions. I would highly recommend CYRISMA for anyone wanting to do data classification, mitigation, or vulnerability scanning."

### 1 THING TO REMEMBER

#### The Power of the EcoSystem

In a cluttered and confusing cybersecurity market there are many options to choose from. Organizations are forced to spend in excess of \$100,000 annually to license multiple, costly solutions to cover their risk management needs and then end up using only 10% of features. CYRISMA combines the cybersecurity features everyone needs into ONE interface offering a full cyber risk ecosystem at a fraction of the traditional cost.
