

A revolutionary cybersecurity risk intelligence platform

ABOUT CYRISMA

CYRISMA is a revolutionary cybersecurity SaaS platform that replaces the need for single point products. CYRISMA is a single cybersecurity platform that helps manage risk, vulnerabilities, and dark web threats on virtually any endpoints - it's the only single "all-in-one" cybersecurity risk scanning product. There are no complicated licensing fees or maintenance contracts, our program offers endpoint pricing from 10 - 100,000+ with cost savings up to 60% from single point product costs!

Partnering with CYRISMA means you no longer need to invest in a complicated collection of disconnected solutions.

CYRISMA is a multi-tenant platform that offers simple cloud-based access from anywhere with complete reporting capabilities. Organizations are relieved of the complexity of trying to manually convert many unrelated reports into meaningful action plans.

Making Risk Management Simple!

Our platform is affordable and simplistic, enabling organizations to identify and begin reducing cyber risk in a matter of hours, not weeks or months. Risk reduction progress is monitored and measured continuously providing the foundation for a robust and effective Security Risk Management Lifecycle Framework.

Intuitive, easy-to-use interface.

Simply install at least one software sensor within the organization network, and then all configuration, scanning, reporting, planning, and risk execution is done from a unified and secure web interface that is accessible from anywhere!

An "all-in-one" cybersecurity tool that...

...drives tool consolidation

...addresses budget constraints through it's affordability

...is simple to implement and manage effectively

...delivers reporting capabilities on several critical and sensitive areas

...provides the best solution for cyber risk assessments

...validates environments to address cybersecurity insurance concerns and premium pricing

"ALL-IN-ONE" CYRISMA FEATURES

SENSITIVE DATA DISCOVERY - Discover your sensitive data, where it is located and who has access to it.

VULNERABILITY MANAGEMENT - Perform Internal and External, Agentless and Agent-based vulnerability scans to find and fix critical vulnerabilities quickly.

SECURE CONFIGURATION - Assess internal systems' configuration against CIS Control benchmarks to identify and fix misconfigurations.

DARK WEB MONITORING - Monitor the dark web for leaked or stolen information about your organization and track any discussion about your brand in cybercriminal communities.

RISK MONETIZATION - View the potential costs of breaches, ransomware attacks and the value of your sensitive data in dollar amounts for improved cybersecurity decisions and resource allocation.

RISK MITIGATION - Create mitigation plans, define accountability and assign to teams and individuals within your organization.

SCORE CARDS - Have the information collected by the latest scans of your IT environment and assets be presented on a single, unified dashboard.

CYBER RISK ASSESSMENT REPORTING - Produce complete cyber risk assessment reporting in one, clear and concise working document.

ADDITIONAL CYRISMA FEATURES - Agent/Sensors, Network Discovery, Compliance Tracker & Target Risk Matrix.
