

CYBER RISK ASSESSMENT REPORTING

CYBER RISK ASSESSMENT REPORTING

Information Security teams are constantly battling against time to stay ahead of threat actors. CYRISMA's risk management platform gives you the ability to perform Cyber Risk assessments and create assessment reports in minutes by following 10 simple steps. With vulnerability scans, assessments and reporting done in a matter of minutes, security teams can find and remediate vulnerabilities *before* a cybercriminal has a chance to exploit them.

Our assessment reports collate the key findings under all scan categories and features in the platform - External/Internal Vulnerability Assessment, Data Sensitivity Scanning, External Web App Testing, Secure Configuration, Dark Web monitoring and Risk Monetization - to provide a complete picture of the security gaps in your organization's IT environment. Monetizing risk is key when showing the leadership team or business stakeholders where the focus needs to be to reduce risk, and to get budget-holders on board for future funding to strengthen security.

The Power of CYRISMA

- 1 DISCOVER** - CYRISMA's Risk Assessment Reports help you provide essential information about the vulnerabilities identified in your customer's environment to business leadership and other stakeholders in an easy-to-understand format.
- 2 UNDERSTAND** - the reports are non-technical and provide a big-picture view of the organization's cyber risk posture to senior management, so they are able to ask specific questions about risk reduction and how to move the needle forward.
- 3 MITIGATE** - with key performance metrics and critical security gaps presented on simple dashboards, business leaders get a clear line of sight into essential focus areas and mitigation priorities, without getting lost in the weeds.
- 4 MANAGE** - you can generate the report on a regular basis and monitor progress on risk reduction over time. You will also be able to show value through the implementation of the CYRISMA platform.
