DARK WEB MONITORING

A POWERFUL DARK WEB MONITORING TOOL

With CYRISMA's dark web monitoring tool, you can find any of your own or your customers' sensitive information being discussed in criminal forums, underground sites, and the untracked/hidden parts of the internet that you can't find using search engines.

Our dark web crawler combs the dark web to find any compromised accounts associated with your domains, and whether your data or brand is being discussed or sold in hacker marketplaces. Dark web intelligence helps you spot signs of potential attacks against your organization early, so you can take preventive measures to strengthen your defences and stop malicious activity before it causes serious damage.

CYRISMA alerts you to dark web activity involving your own or your customers' information, in real time. With early warnings about data leaks and compromised information, you can be better prepared to either prevent or respond to potential attacks exploiting the compromised data. The CYRISMA platform comes with an in-built translator so you don't have to worry about not being able to understand dark web discussions being conducted in foreign languages.

The Power of CYRISMA

1 **DISCOVER** information and mentions of your brand on the dark web without compromising your own network. Review dark web data points every 24 hours to find out if your own or your customers' data has been compromised.

2 **UNDERSTAND** all the different elements of the dark web and the ways in which your compromised information may be misused - from hackers discussing techniques to get into your network, to your sensitive information being sold in hacker marketplaces.

3 **MITIGATE** through tweaking your incident response strategy to deal with potential attacks more effectively; stop malicious activity early; and assess the damage that attackers may have caused in the past attacks.

4 **MANAGE** secure cyber risk more effectively with the ability to monitor the dark web. Make strategy changes and pivot quickly to block attacks and control damage if your own or your clients' information appears on the dark web.
