

SCORE CARDS

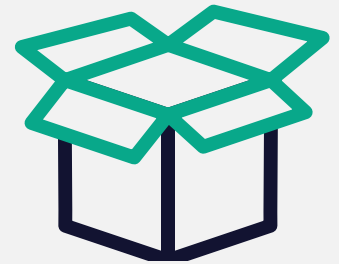

CYBERSECURITY SCORE CARDS

CYRISMA's Security Score Cards take the information collected by the latest scans of your IT environment and assets, and present it on a single, unified dashboard. You get a complete view of the entire organization's cyber risk and internal & external attack surface, which can be easily presented to leadership teams or business stakeholders to give them a clear understanding of the company's security posture. The score cards will also help you demonstrate progress and how quickly you were able to move the needle in the direction of reducing tactical cyber security risks.

With a unified view of risks and vulnerabilities across your databases, servers, endpoints, applications and computing environments, you can help your own organization's executive leadership as well as client organizations to understand their security gaps and weaknesses, and which operational areas to focus on in order to attain cybersecurity maturity.

With CYRISMA, Information Security Teams no longer need to capture information from multiple point solutions to correlate offline in order to present in a report or presentation.

Breach Notification Costs
Overall Risk
Risk Trends
Data Sensitivity
Compliance Tracker
Sensitive Dark Web Value
Residual Risk Costs
Ransomware Recovery Costs
Vulnerabilities

The Power of CYRISMA

1

DISCOVER - CYRISMA'S Score Cards provide a quick view of your organization's cybersecurity risk levels and show you your weakest links at a glance. You can then drill down into specific categories to get detailed information.

2

UNDERSTAND - risk assessment grades quantify your risk levels in various assessment categories and allow users from both technical and non-technical teams to understand areas of weakness and compare month-on-month performance.

3

MITIGATE - the Score Cards help you plan and prioritize your risk mitigation efforts and move the needle on strengthening security. Create consistent mitigation workflows that end users, tech teams and leadership can follow easily.

4

MANAGE - while risk cannot be completely eliminated, the Score Cards can help you easily assess your cybersecurity performance and point to major gaps so you can reduce risk to a tolerable level. You can also track progress over time.
