

ABOUT CYRISMA

CYRISMA is a cybersecurity SaaS solution that offers a complete risk management eco-system, allowing organizations to protect their own and their clients' environments using a single, feature rich interface.

It is a unique cybersecurity product that eradicates a complex, multi-application/vendor approach. CYRISMA can be integrated through a simple and rapid deployment process, and provides organizations with a proven security framework that uses our three-way structured approach consisting of seven simple steps:

Data Discovery: Allowing your organization and your clients to know what sensitive data they have, where the sensitive data is located and who has access to it.

Risk Assessment: Giving your organization and your clients the ability to know if the systems housing the sensitive data have vulnerabilities and whether the data is secure.

Relevant Action: Empowers your organization to track and monitor mitigation. The Patching feature enables you to fix vulnerabilities in 3rd-party Windows-based apps.

KEY FEATURES

DATA SENSITIVITY

Search storage types and see where sensitive data is stored. Reduce foot-print before the bad actor attacks and holds it for ransom

VULNERABILITIES

Perform vulnerability scanning, assessment and root cause analysis. Know when vulnerabilities were first seen. Patch 3rd Party Windows-based apps.

SECURE BASELINE

Scan assets against CIS Benchmarks to establish tighter security controls. Reduce the risk of being breached or compromised and adhere to regulatory compliance.

SCORE CARDS

View your collected risk data and industry comparison in "view at a glance" dashboards to determine how well you are doing in reducing your technical risk and how you compare with others in the same industry.

RISK MITIGATION

Create mitigation plans, define accountability and assign to individuals within your organization.

DARK WEB

Monitor the Dark Web for company IPs, domains and email addresses that may have been leaked or stolen.

Additional CYRISMA Features:

Risk Monetization, Active Directory Monitoring, Network Discovery, Compliance Tracker, Microsoft Copilot Readiness Assessment, Microsoft Secure Score, RESTful API

PARTNER BENEFITS

RAPID DEPLOYMENT

We created CYRISMA to ensure there was minimal impact on resources

Our implementation process is one of the fastest in the industry. Partners are ready to go within 1.5 hours, which includes training and deployment!

PROACTIVE APPROACH

CYRISMA allows our partners to follow a proven security framework.

Reduce the risk of cyber threats through our three-way structured approach (*Data Discovery, Risk Assessment & Relevant Action.*)

SIMPLICITY

CYRISMA is a feature-rich platform with all the features on one single and easy-to-use interface

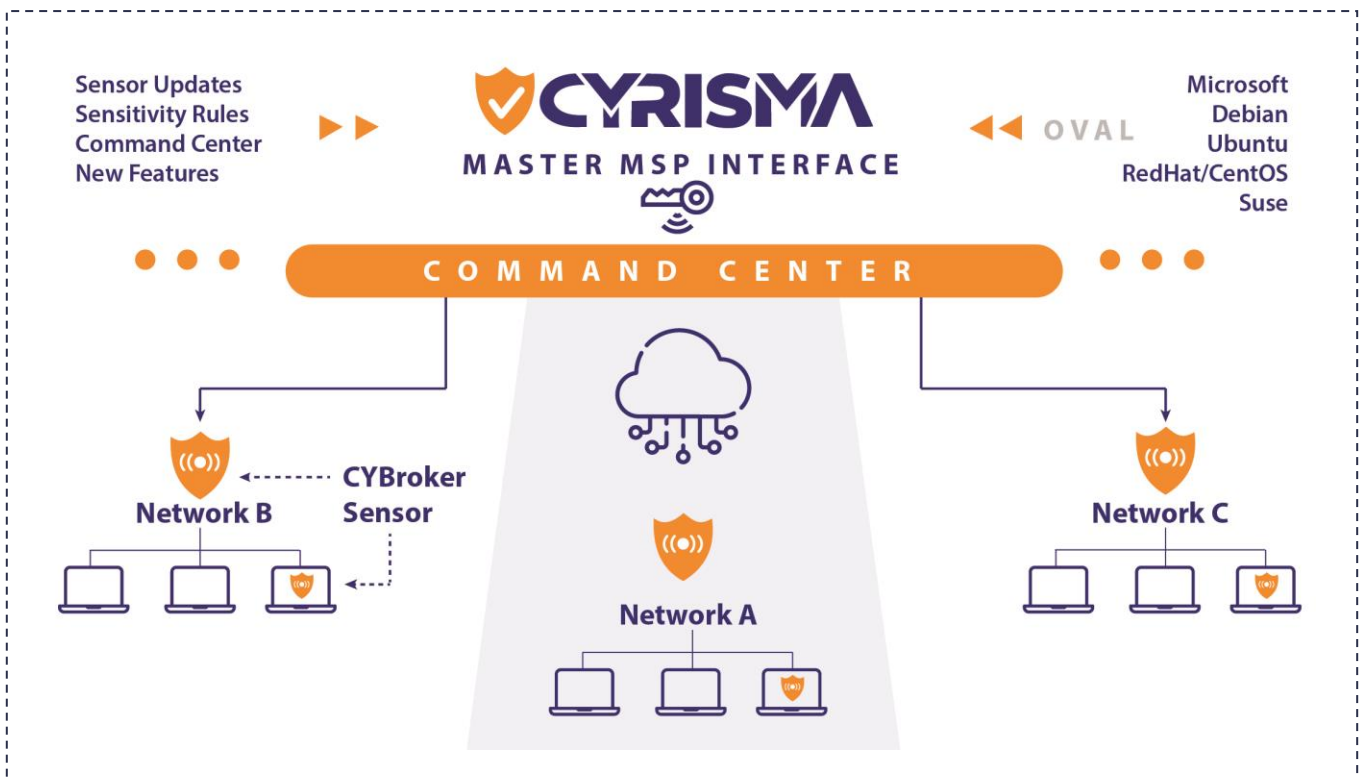

A suite of cyber risk features to eliminate the need to piece together multiple technology applications or vendors to reduce confusion and increase focus.

ADDITIONAL REVENUE

Receive the CYRISMA platform at a very affordable price and attractive licensing options.

Add marginal gains, reduce costs and expand your cybersecurity service portfolio with CYRISMA's multiple capabilities.

HOW IT WORKS

1

Small footprint on-site sensor means that you can quickly deploy CYRISMA with minimal effort

2

Use the CYRISMA Managed Services Portal to access and manage all clients

3

Get a quick overview of the risk profile of each of your clients in our simplified executive dashboards

4

Deep dive into any client instance to retrieve information and schedule or manage cyber risk related activities

PARTNER COMMENTS

"CYRISMA is the only security suite on the market that offers out of the box Data Discovery (DLP), Vulnerability Assessment, and Server Configuration Monitoring. The platform is cost-effective for clients with on-premises, hybrid or cloud infrastructure requiring these core capabilities." - **CyFlare**

"Our initial feedback is WOW. The capability of the tool is endless and it is very, very easy to deploy. There really isn't another product out there that will plug and play the way CYRISMA does. One of our customers had suffered a potential breach and we used CYRISMA to get results that we couldn't even get from the insurance-assigned forensics company to identify if HIPAA data was compromised. You have a game-changer here" – **Innovative Solutions**

"We recently migrated to CYRISMA because we struggled with our last vendor because of the time it took to keep the tool running. Cyrisma just WORKS. It does more and costs less than its competition, and the support team is incredible. It is obvious Cyrisma was built by people who understand the needs of the security community. Can't recommend them enough!" - **Morrison-Maierle Systems**
