

Microsoft Copilot Readiness Assessment

CYRISMA's powerful feature-set now includes Microsoft Copilot Readiness Assessment.

Secure and Seamless Copilot Deployment

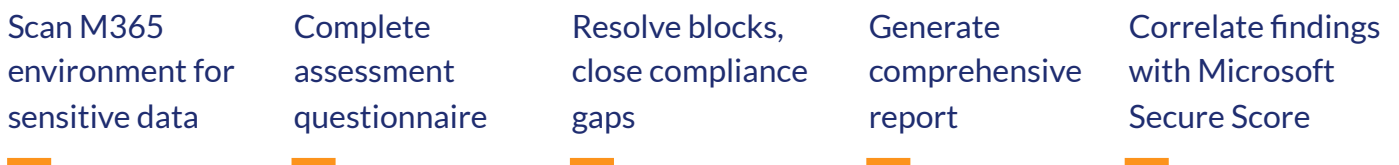

CYRISMA's Microsoft Copilot Readiness Assessment feature helps users with seamless, compliant and secure Copilot deployment. Ensure that you continue to meet stringent security and data governance standards as you leverage the transformational capabilities of Microsoft Copilot.

The Assessment examines your readiness for Microsoft Copilot under four main categories – **User Information, Organizational Profile, Productivity Tools, and Data Security**. Generate a detailed compliance report to share with stakeholders after the assessment.

Assessment Process (High-level)

The Copilot Readiness feature builds on CYRISMA's Microsoft 365 Data Scanning capability. Set up M365 integration, scan your Microsoft cloud environment for sensitive data, perform Copilot assessment, and close any compatibility, compliance or security gaps you find.

More about CYRISMA

Copilot Readiness Assessment is just one part of CYRISMA's broader cybersecurity ecosystem. The consolidated platform enables users to run vulnerability and data scans, assess and manage overall cyber risk, track compliance, and strengthen their security posture without the need to invest in multiple products.
