

Essential Eight - Compliance Assessment

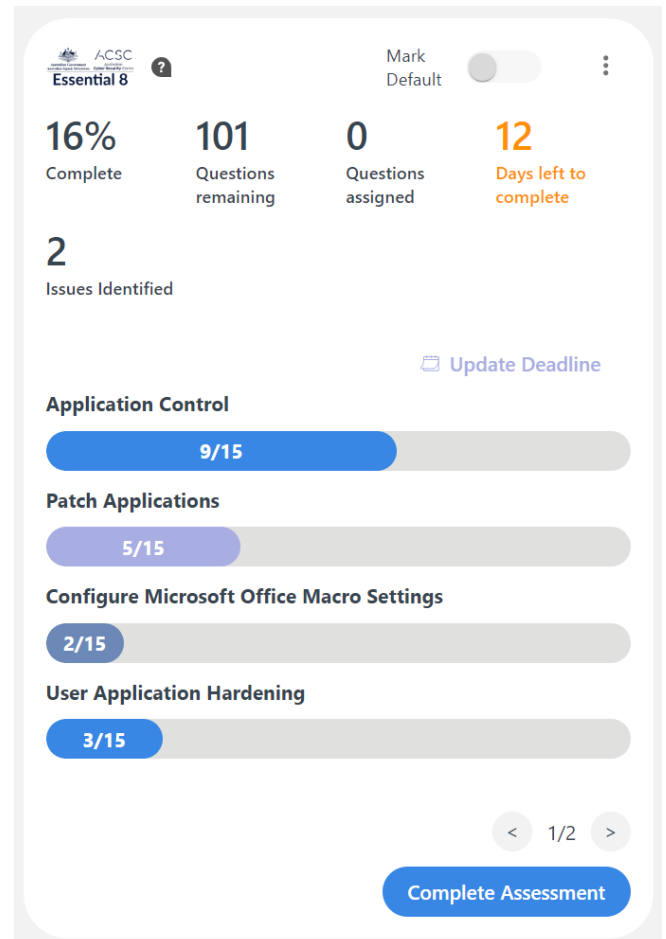

Track implementation, find compliance gaps, upload evidence, collaborate, generate assessment report

Track and Assess the Implementation of the Essential Eight Strategies (ACSC Australia) and all included Controls

CYRISMA's Essential Eight Compliance Assessment includes a complete suite of features to track and assess your own and your clients' implementation of all 120 controls included under the Essential Eight strategies.

The eight mitigation strategies are: Application Control, Patch Applications, Configure Microsoft Office Macro Settings, User Application Hardening, Restrict Administrative Privileges, Patch Operating Systems, Multi-Factor Authentication, and Regular Backups, with 15 controls under each category.

Simplify Essential Eight compliance tracking, upload evidence, and generate customizable reports. Map tactical controls to the vulnerability, configuration and data scans performed using CYRISMA, and close compliance gaps easily. Each control in the compliance questionnaire has the corresponding maturity level (L1, L2, L3) indicated next to it.

Assessment Process (High-level)

- Review full list of controls under each strategy in one dashboard
- Get an overview of progress status on the main compliance dashboard
- Auto-track tactical controls implemented using CYRISMA
- Provide control and assign tasks to other teams, upload evidence docs
- Review and resolve blocks, close compliance gaps
- Generate comprehensive assessment report

More about CYRISMA

The CYRISMA Cyber Risk Management Platform combines essential capabilities for partners to run vulnerability and data scans, assess and manage overall cyber risk, track compliance, and strengthen security posture without the need to invest in multiple products. ALL features - including the cyber risk scans and GRC assessments - are cost-inclusive.
