

# HIPAA - Compliance Assessment

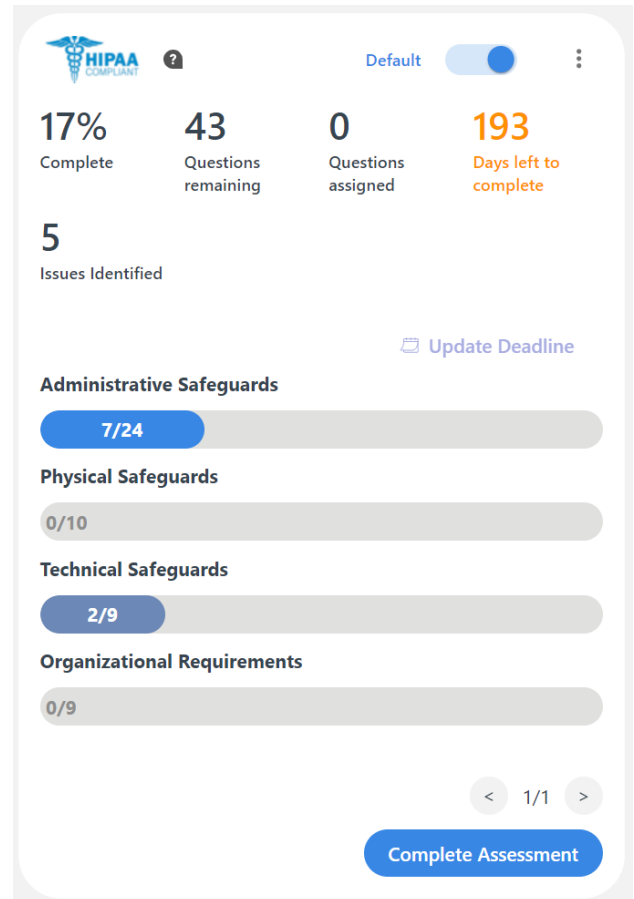

Track implementation, find compliance gaps, upload evidence, collaborate, generate assessment report

## Track and Assess the Implementation of all HIPAA data privacy safeguards

CYRISMA's Health Insurance Portability and Accountability Act (HIPAA) Assessment includes a complete suite of features to track and assess your own and your healthcare clients' implementation of the 52 HIPAA safeguards. Safeguards are tracked under the following categories: Administrative, Physical, Technical and Organizational Requirements.

Simplify HIPAA compliance tracking, upload evidence, and generate customizable reports. Map tactical controls to the vulnerability, configuration and data scans performed using CYRISMA, and close compliance gaps easily.

The Assessment is just one part of CYRISMA's larger Compliance module which also covers NIST CSF, the CIS Controls, Microsoft Copilot Readiness Assessment, PCI DSS, the Cyber Essentials (UK), the Essential 8 (Australia), CyberSecure Canada and more!

## Assessment Process (High-level)

- Review full list of requirements under each category in one dashboard
- Get an overview of progress status on the main compliance dashboard
- Auto-track tactical controls implemented using CYRISMA
- Provide control and assign tasks to other teams, upload docs as evidence
- Review and resolve blocks, close compliance gaps
- Generate comprehensive assessment report

## More about CYRISMA

The CYRISMA Cyber Risk Management Platform combines essential capabilities for partners to run vulnerability and data scans, assess and manage overall cyber risk, track compliance, and strengthen security posture without the need to invest in multiple products. ALL features - including the cyber risk scans and GRC assessments - are cost-inclusive.
