

Release Notes: 2.117.1.148

Version 2.117.1.148

Release Date: March 26, 2025

CYRISMA Version 2.117.1.148 feature releases and updates

Fixes in User Experience and Functions

Dark Web

Setup Dark Web Monitor - Updated domain validation logic to resolve issues preventing valid domains from being monitored.

MSP

Central Vulnerability Manager PSA Integration - Users can now generate PSA tickets directly from search results within the Central Vulnerability Manager (Search CVM) modal.

Quick Start

Dark Web Setup Form - Simplified the Quick Start (Page 3/4) to align with the main Dark Web Monitor setup. Removed outdated fields such as Email Notification, IP Addresses, and Validation Address for a cleaner, more consistent experience.

Report Builder

Dark Web Reports - Reports have been updated to reflect current data and improved formatting for consistency.

Secure Baseline Duration Report - Fixed an issue where macOS scan results were missing. Reports now accurately reflect findings across all scanned operating systems.
